Art Unit 1644

4. Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-8, 18-23, 25-27, 29-31; drawn to C5-specific antibodies, and compositions and hybridomas thereof, classified in Class 424, subclass 130.1; Class 530, subclass 387.1, 388.1.

II. Claims 9-12, 28; drawn to C5-specific antibodies encoding nucleic acids, vectors and hosts and methods of producing said antibody, classified in Class 435, subclass 70.21, 252.3, 320.1, 326; Class 536, subclass 23.53.

III. Claim 13, drawn to an isolated oligopeptide, classified in Class 530, subclass 300.

IV. Claim 14, drawn to a method of identifying an anti-C5 antibody by screening with an oligopeptide, classified in Class 435, subclass 7.1.

V. Claim 15, drawn to a method of treatment with C5-specific antibodies, classified in Class 424, subclass 130.1.

VI. Claims 16-17, drawn to methods of refolding single chain antibodies, classified in Class 435, subclass 440.

5. Inventions I and V are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (M.P.E.P. § 806.05(h)). In the instant case, the product as claimed can be used in a materially different process such as immunopurification procedures or diagnostic assays (or detection assays).

6. Inventions II and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (M.P.E.P. § 806.05(h)). In the instant case, the product as claimed can be used in a materially different process such as affinity purification procedures or diagnostic assays (or detection assays).

7. Inventions IV and V are different methods of use. These inventions require different ingredients, process steps and endpoints. Therefore they are novel and unobvious in view of each other and are patentably distinct.

8. Inventions I/II/III are different products. Antibodies, nucleic acids, vectors, host cells and peptides are distinct because their structures and modes of action are different. Therefore they are novel and unobvious in view of each other and are patentably distinct.

Serial No. 08/487283
Art Unit 1644

9. Inventions I and II/VI are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (M.P.E.P. § 806.05(f)). In the instant case, the immunoglobulins can be made via a variety of recombinant and biochemical means.

10. Because these inventions are distinct for the reasons given above and the search required for any group from Groups I-VI is not required for any other group from Groups I-IV and Groups I-VI have acquired a separate status in the art as shown by their different classification and divergent subject matter, restriction for examination purposes as indicated is proper.

11. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

12. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).

13. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phillip Gambel whose telephone number is (703) 308-3997. The examiner can normally be reached Monday through Thursday from 7:30 am to 6:00 pm. A message may be left on the examiner's voice mail service.
